

MUSCLE SUIT Selling Steadily after Topping 20,000 Units

TOKYO, July 7, 2021

Developed and sold by Innophys, Co., Ltd., MUSCLE SUIT has sold a cumulative total*¹ of over 20,000 units all over the world as of the last day of April 2021, making it the world's best-selling*² exoskeleton assist suit. This number continues to grow steadily.

Notes:

(*1) Total number of units shipped since the first-generation model.

(*2) According to Innophys' research.

■ About MUSCLE SUIT Every

MUSCLE SUIT is a wearable assist suit utilizing artificial muscles that are powered by pneumatic pressure without using electricity. Designed to reduce the load applied to the lower back when the user is maintaining a squatting position, holding someone, lifting a heavy object, etc., MUSCLE SUIT contributes to the improvement of working environments and the addressing of labor shortages.

Since launching the 1st MUSCLE SUIT in 2014, Innophys has developed new models every year in an effort to achieve lighter weight and lower prices while maintaining all the functions. In November 2019, Innophys launched MUSCLE SUIT Every, with an even lighter weight and lower price made possible through mass production.

■ Active expansion into international markets

In 2020, Innophys started to enter international markets in earnest, focusing mainly on exploring sales networks in Europe and Asia. Through these measures, the series sold a cumulative total of over 20,000 units just over one year after selling 10,000 units in March 2020.

Innophys is looking for distribution partners to deliver MUSCLE SUIT to people around the world engaged in heavy physical labor, including at factories, in nursing care, and in agriculture.
